## EXPERIENCE

### **HP, Chennai— *Web developer and Data scientist***

Nov 2016 - Sep 2019

Developed a web interface using React, Flask and microsoft sql server.

Worked on a machine learning project using supervised learning technique and python to classify received emails, extract information from those belonging to a specific classification and automate tasks using that information.

Automated web browsers using selenium coupled with another bot which by using machine learning algorithm called as K-Neighbors classifier would extract numbers from emails that should be classified under one of many different classifications.

### **HP, Chennai— *Business operations associate***

September 2015 - Nov 2016

Product data management : Updated and maintained critical information of SKUs in SAP.

Implemented new ideas to decrease time taken for updating information of multiple parts at the same time thus lessening the total time taken to carry out a sales order..

IT compliance : Identified and removed unnecessary accesses for users to critical files and systems.

Checked if user accounts in systems were mapped to appropriate job roles.

### **Torrid Networks, Noida— *Information security consultant***

April 2014 - June 2014

Identified and fixed various vulnerabilities in web applications for clients.

Developed and customized security security applications to monitor local network.
